Handout for Session 5

1. Review of `while` and `for` loops

```
[1]: for i in range(10):
         print(i,end=' ')
```

```
0 1 2 3 4 5 6 7 8 9
```

```
[2]: i=0
     while i<10:
         print(i,end=' ')
         i+=1
```

```
0 1 2 3 4 5 6 7 8 9
```

Q1: Modify each of the above code so as to print the numbers 9 through 0 in reverse order. (There are multiple ways of doing this.)

Q2: Modify each of the above code so as to print all the even numbers between 0 to 10 (inclusive) in ascending order. (There are multiple ways of doing this.)

2. Working with Strings

```
[7]: s='Python for Business Analytics'
```

```
[8]: s[0]
```

```
'P'
```

```
[9]: s[1]
```

```
'y'
```

```
[10]: s[-1]
```

```
's'
```

```
[11]: s[-2]
```

```
'c'
```

```
[12]: len(s)
```

```
29
```

```
[13]: s[0:5]
```

```
'Pytho'
```

```
[14]: s[:5]

'Pytho'

[15]: s[7:10]

'for'

[16]: s[3:3]

''
```

Q3-a): Write a command that checks if the first letter is equal to `"#"`.
Q3-b): Write a command that checks if the string `s` begins with `"Python"`.
Q3-c): Write a command that obtains the substring `"Business"` via positive indexing.
Q3-d): Write a command that obtains the substring `"Analytics"` via negative indexing.

```
[21]: s+' Session 5!'

'Python for Business Analytics Session 5!'

[22]: t=s+'\nSession 5!'
      print(t)

Python for Business Analytics
Session 5!

[23]: 'for' in s

True

[24]: s.startswith('Python')

True

[25]: s.lower()

'python for business analytics'

[26]: s.upper()

'PYTHON FOR BUSINESS ANALYTICS'

[27]: s.find('t')
```

```
2
```

```
[28]: s.rfind('t')
```

```
25
```

```
[29]: s.find('for')
```

```
7
```

```
[30]: line='From pengshi@marshall.usc.edu Tue Jan 22 11:00:00 2019'
```

Q4-a): Write a command to check if the string `line` begins with `from` (case insensitive).
Q4-b): Write a command to check if the string `line` contains `"usc.edu"`.
Q4-c): Write a command to obtain the position of the character `@`.
Q4-d): Write code to extract the substring between `"From "` and the `"@"` character. The code should work also on the following string without any change.

```
[35]: line='From john.doe@usc.edu Tue Jan 22 12:20:00 2019'
```

Working with Files

Download the `mbox-short.txt` file from Blackboard->Datasets->Mailbox data, and save it in the current directory. (You can find the current directory by executing `pwd` in any cell.)

```
[36]: file=open('mbox-short.txt','r')
      count=0
      for line in file:
          line=line.rstrip()
          print(line)
          if count>5:
              break
          count+=1
```

```

```

Q5: Write a program that uses a `for` loop to read through the whole file line by line, and display all the lines that start with `"From:"` and print the total number of such lines at the end.

```
[37]:

```

Q6: Write a program that counts the total number of lines containing occurrences of `@` in the file.

[38]:

```
336
```

Q7: Write a program that counts the total number of emails coming from an address from the domain `...@umich.edu`, display all such addresses, and calculate the average length of such email addresses.

[1]:

```
zqian@umich.edu
zqian@umich.edu
gsilver@umich.edu
gsilver@umich.edu
zqian@umich.edu
gsilver@umich.edu
zqian@umich.edu
Count: 7
Average prefix length: 6.86
```
